

1

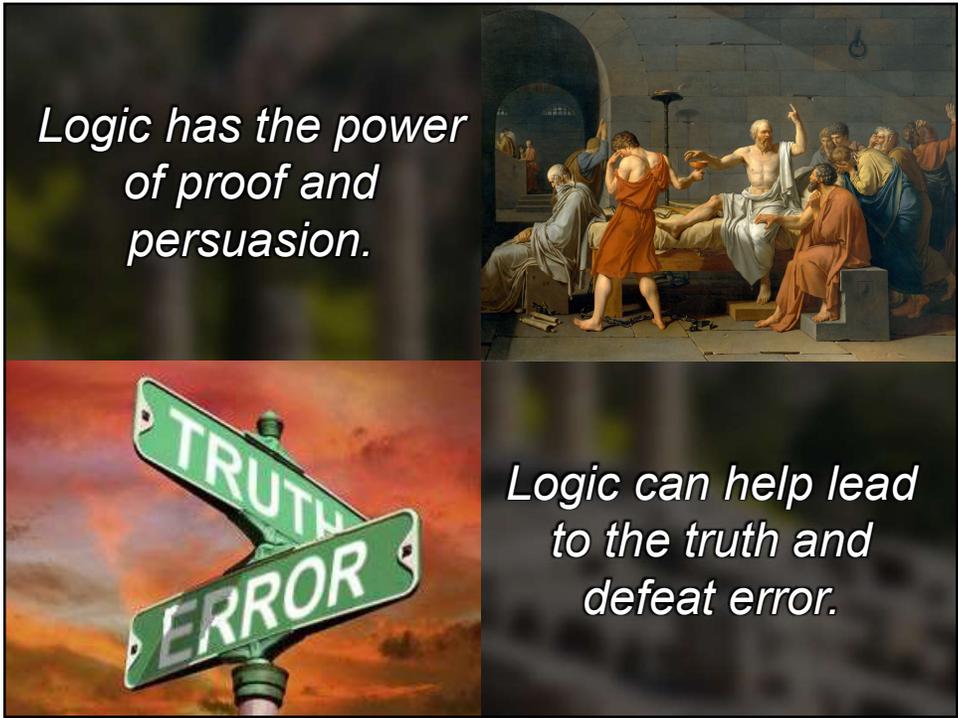

2

Studying logic can build mental "muscles."

Using logic can build the mental habit of thinking in an orderly way.

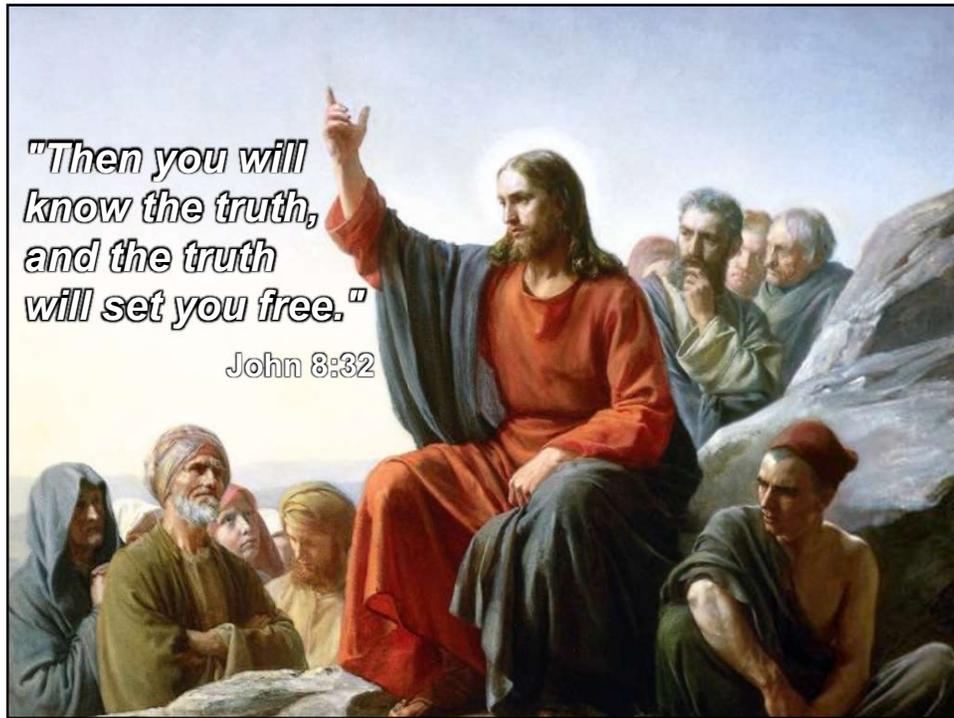

3

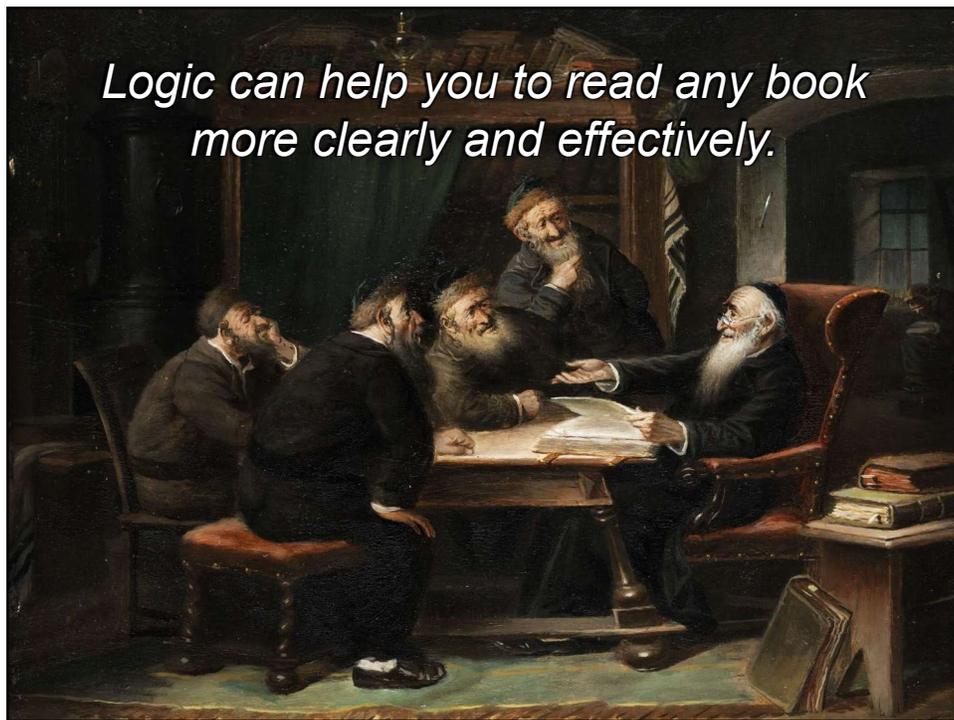

Logic has the power of proof and persuasion.

Logic can help lead to the truth and defeat error.

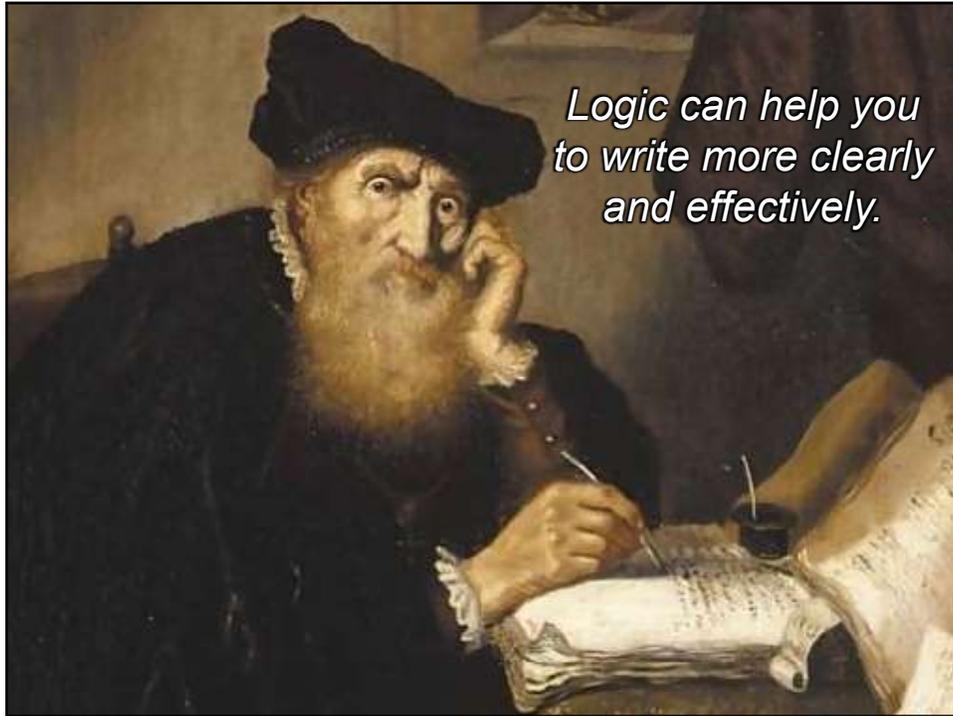

4

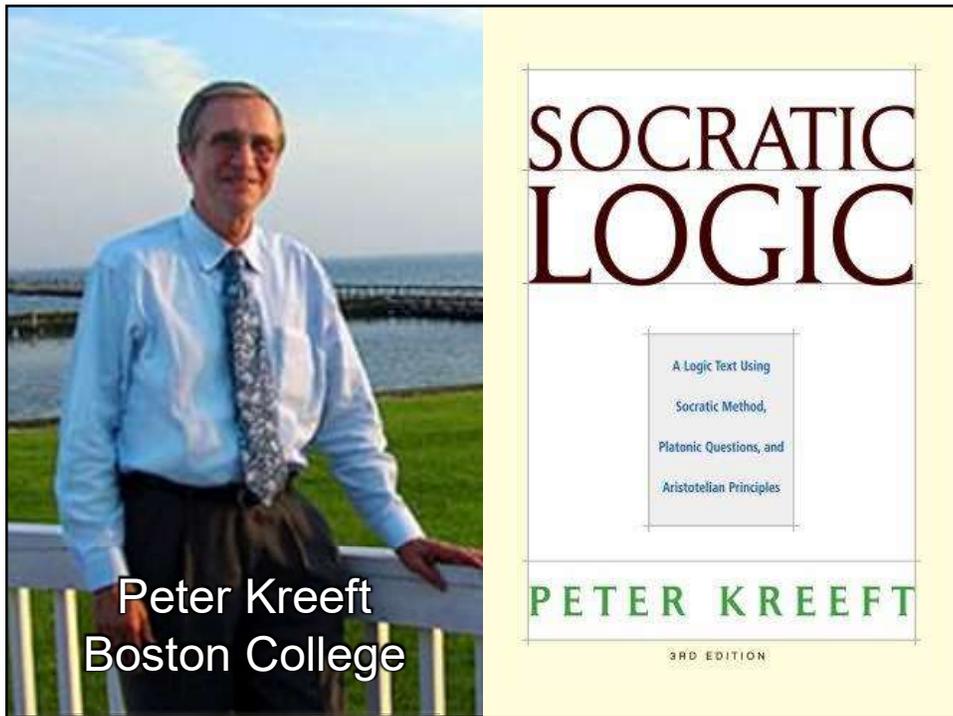

5

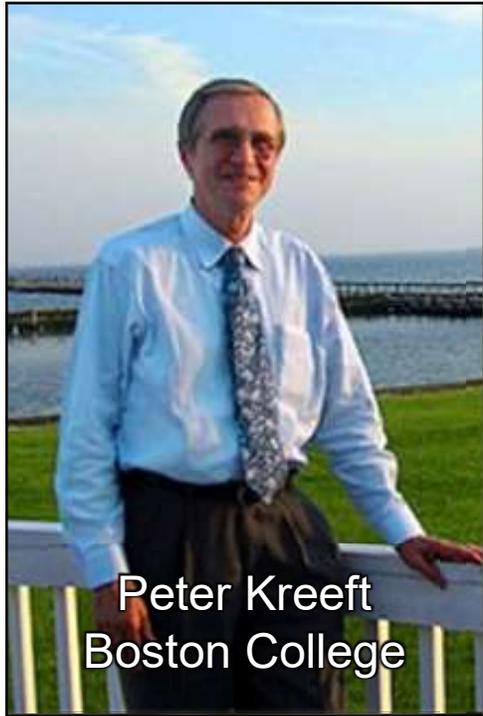

6

7

8

Peter Kreeft
Boston College

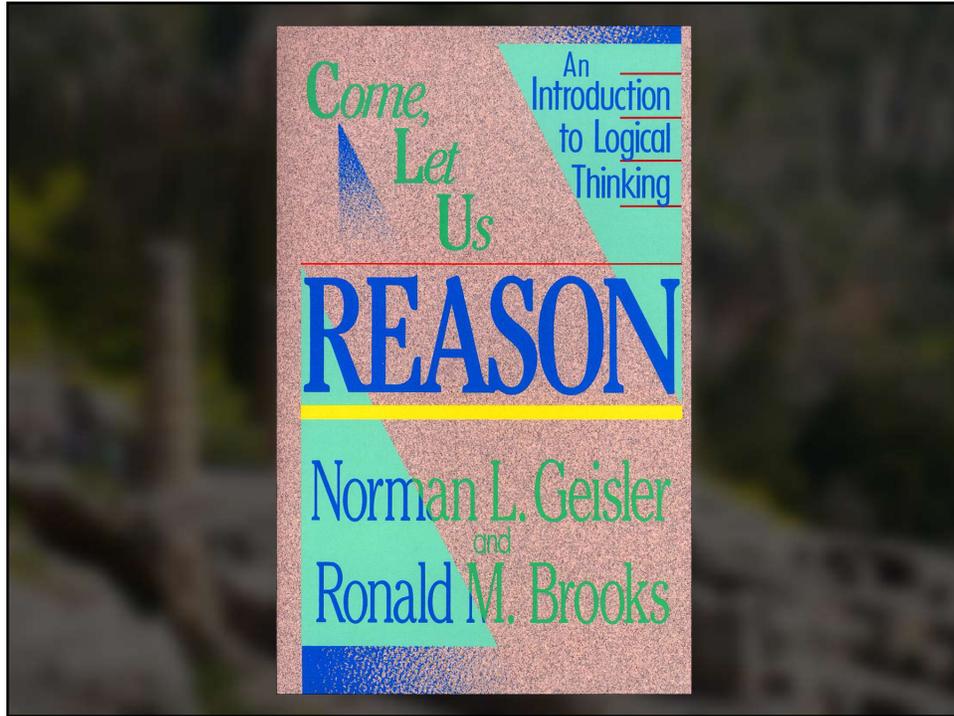

"Writing skills have declined dramatically in the 40 or so years since symbolic logic has replaced Aristotelian logic, and I am convinced this is no coincidence."

PETER KREEFT (Socratic Logic, p. 3)
3RD EDITION

11

***What about
Isaiah 55:8-9?***

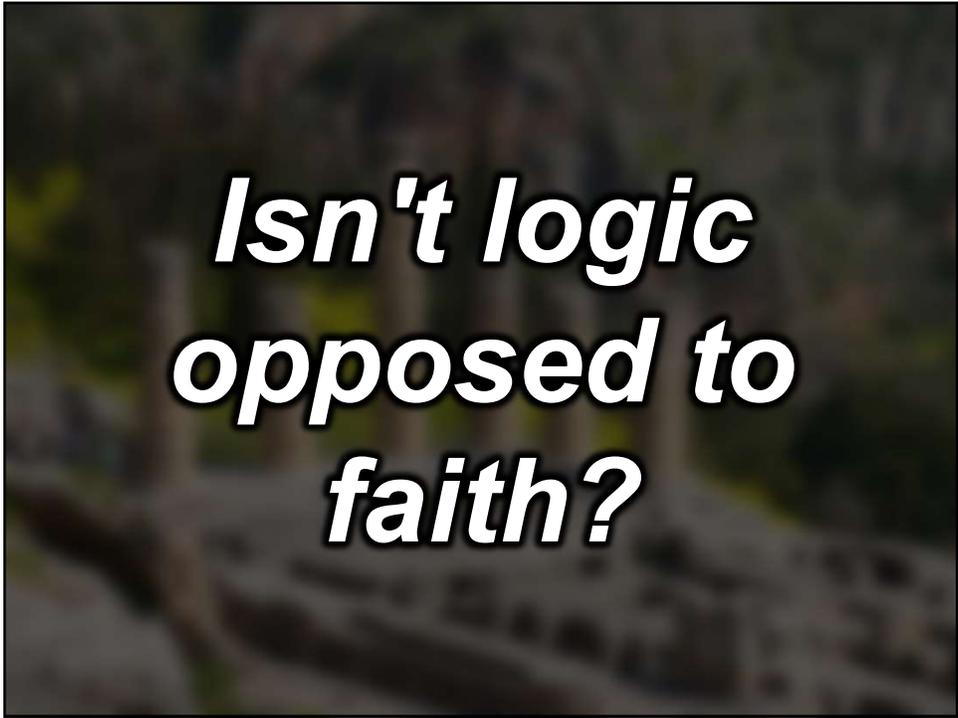

12

{8} "For My thoughts are not your thoughts, nor are your ways My ways," says the LORD. {9} "For as the heavens are higher than the earth, so are My ways higher than your ways, and My thoughts than your thoughts."

13

Isa 55:6-9 {6} Seek the LORD while He may be found, Call upon Him while He is near. {7} Let the wicked forsake his way, And the unrighteous man his thoughts; Let him return to the LORD, And He will have mercy on him; And to our God, For He will abundantly pardon.
{8} "For My thoughts are not your thoughts, nor are your ways My ways," says the LORD. {9} "For as the heavens are higher than the earth, so are My ways higher than your ways, and My thoughts than your thoughts."

14

15

16

"Faith is believing in something when
common sense tells you not to."

17

~~"Faith is believing in something when
common sense tells you not to."~~

18

*"Jesus loves me this I know
for the Bible tells me so."*

*"You ask me how I know He lives,
He lives within my heart."*

19

Faith

*opinion
values
inner
private
emotional
feelings
subjective
religion
true for me*

Reason

*truth
facts
outer
public
rational
thoughts
objective
science
true for all*

20

The Proper Conception

Reason

Believing those things demonstrated by appropriate disciplines, e.g., philosophy, science, mathematics, history

Certain truths can be discovered both about God and creation.

- God's existence and attributes
- DNA molecule
- Fermat's Last Theorem

General Revelation
Rom. 1:19-20
Psalm 19:1-4

Faith

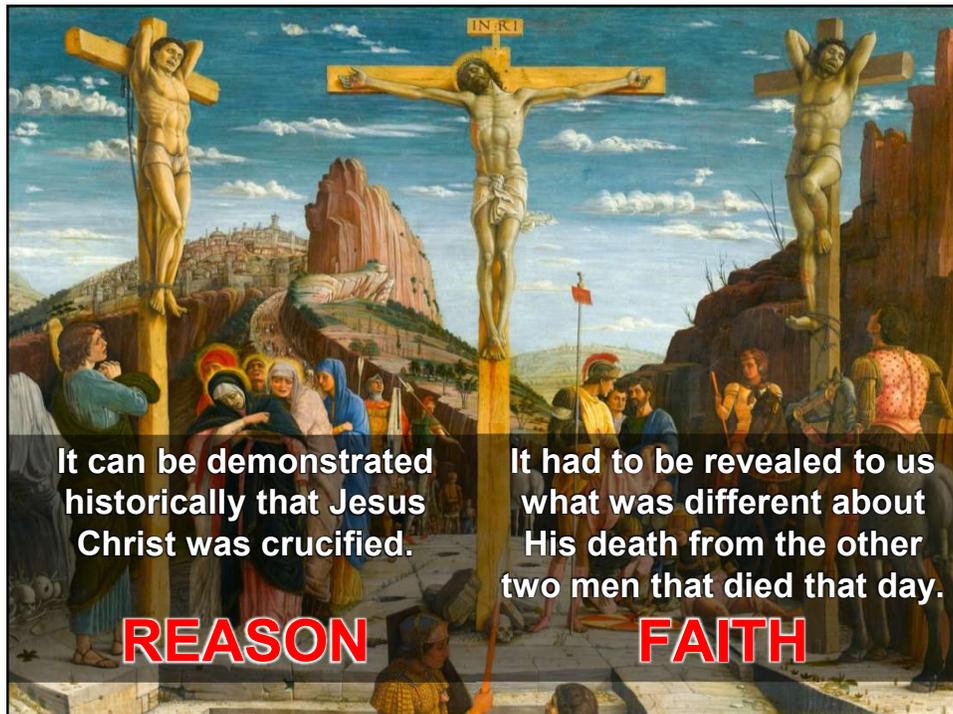

Believing those things revealed by God through Christ and Scripture that could not be discovered by reason alone

Certain truths are revealed both about God and creation.

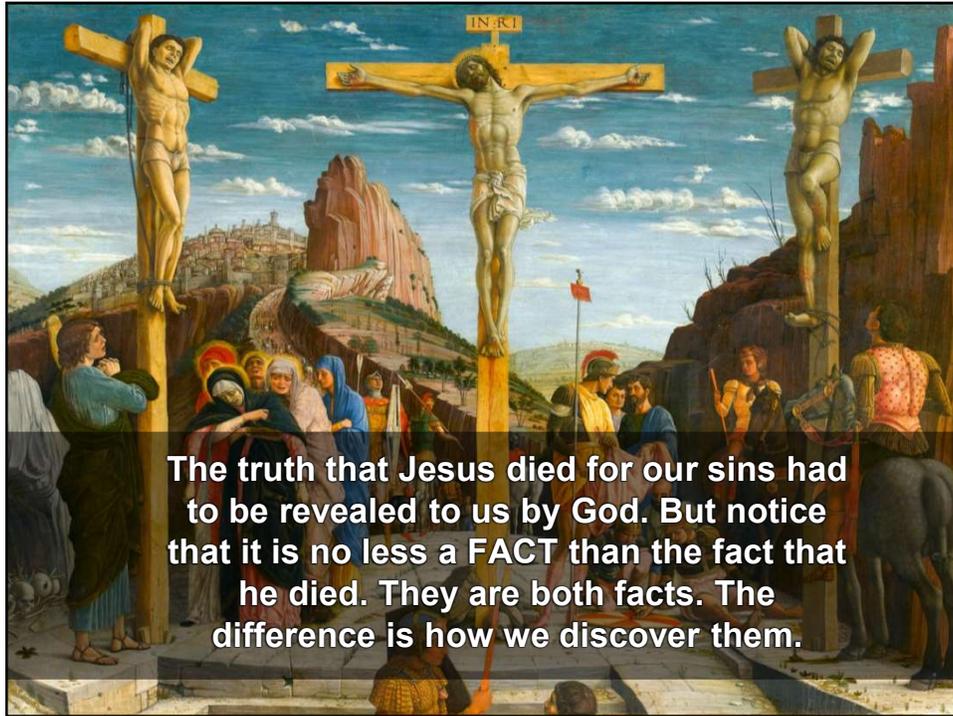

- The Trinity
- The Gospel
- Second Coming

Special Revelation
2 Peter 1:21
Col. 2:9; John 14:9

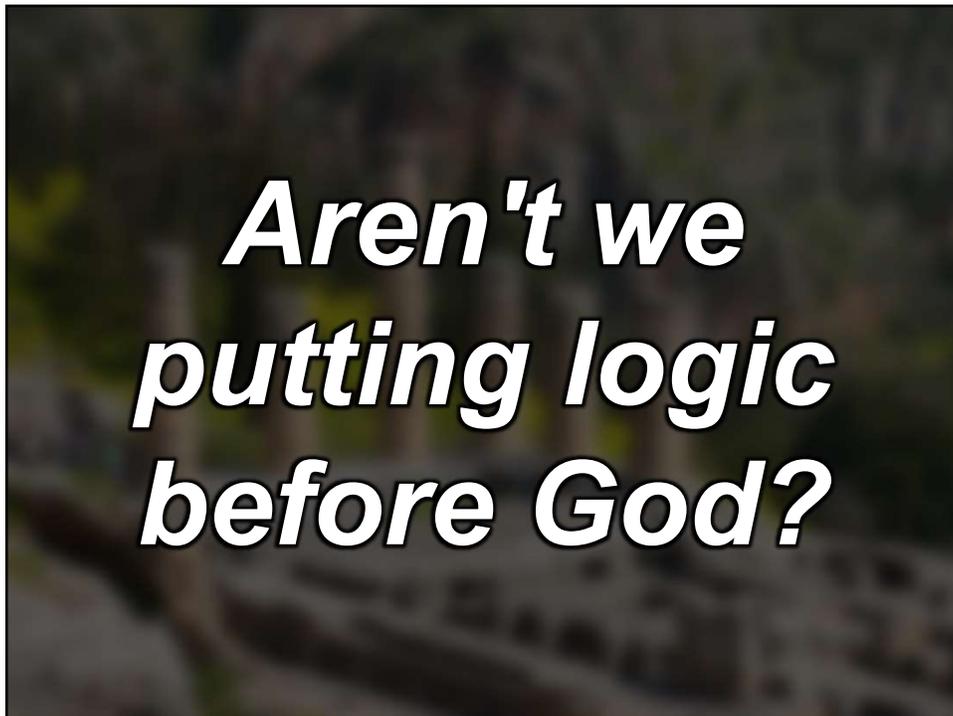

21

22

23

24

Response

There is a difference between "the order of knowing" and "the order of being"

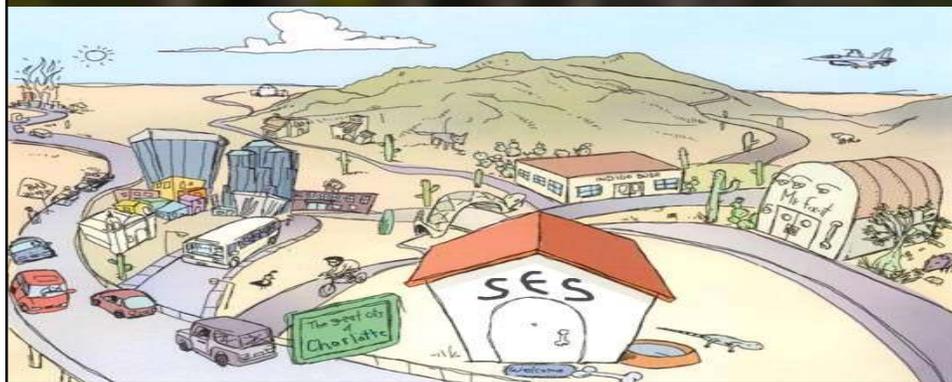

map to SES example

The order of knowing vs. the order of being

25

Response

map to destination example

26

Response

*The map is first
in the order of knowing.*

*SES is first
in the order of being.*

27

***Aren't we
putting OUR
logic before
God?***

28

☞Response☞

It is not "our" logic.

Logic is an expression of
the nature of God Himself.

29

***Isn't this a
form of
Rationalism?***

30

☞Response☞

*There is a difference between being rational
and Rationalism.*

The notions of self-evident truths or
rationally inescapable truths do not
constitute Rationalism.

31

***Isn't this limiting
God? After all,
can't God do the
impossible?
Is there anything
God cannot do?***

32

☞Response☞

God cannot violate His own nature.

Logic is an expression of the nature of God
Himself.

33

***Can't God
break the laws
He creates?***

34

☞Response☞

Logic was not created by God. It is an expression of God. (like goodness)

35

Don't some doctrines involve contradictions, like the Trinity?

36

Response

*There is nothing in the doctrine of the Trinity
(or any other biblical doctrine) that is
illogical.*

There is a difference between something
being beyond reason and something being
against reason.

37

***If logic is so helpful,
how can such a great
logician as the atheist
philosopher Bertrand
Russell be so far from
the truth?***

38

Response

If you start a race facing the wrong direction, then the faster you can run, the quicker you will be in getting farther from the finish line.

39

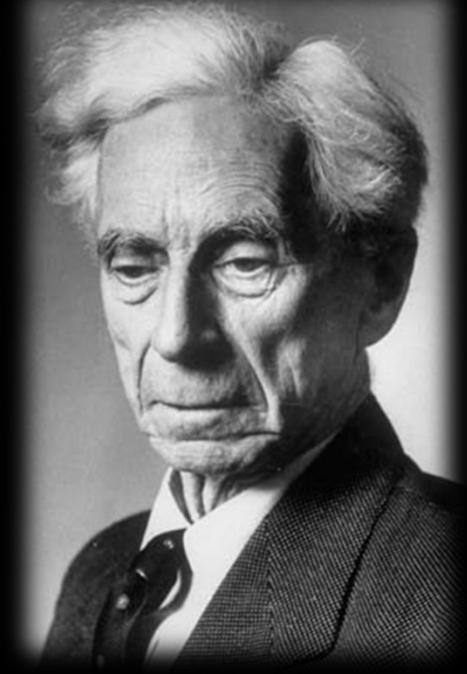

Bertrand Russell

1872-1970

11th August, 1918

It is quite true what you say, that you have never expressed yourself – but who has, that has anything to express? The things one says are all unsuccessful attempts to say something else – something that perhaps by its very nature cannot be said. I know that I have struggled all my life to say something that I never shall learn how to say. And it is the same with you. It is so with all who spend their lives in the quest of something elusive, and yet omnipresent, and at once subtle and infinite. One seeks it in music, and the sea, and sunsets; at times I have seemed very near it in crowds when I have been feeling strongly what they were feeling; one seeks it in love above all. But if one lets oneself imagine one has found it, some cruel irony is sure to come and show one that it is not really found. (I have come nearest to expressing myself in the chapter on Education in *Social Reconstruction*. But it is a very long way from a really full self-expression. You are hindered by timidity.)

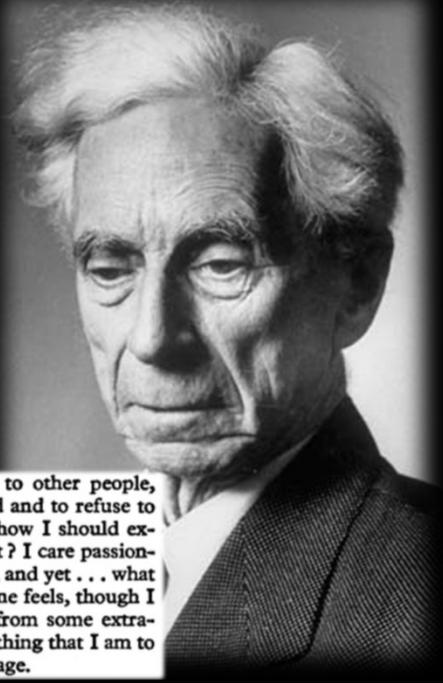

The outcome is that one is a ghost, floating through the world without any real contact. Even when one feels nearest to other people, something in one seems obstinately to belong to God and to refuse to enter into any earthly communion – at least that is how I should express it if I thought there was a God. It is odd isn't it? I care passionately for this world, and many things and people in it, and yet . . . what is it all? There *must* be something more important, one feels, though I don't *believe* there is. I am haunted – some ghost, from some extramundane region, seems always trying to tell me something that I am to repeat to the world, but I cannot understand the message. But it is from listening to the ghost that one comes to feel oneself a ghost. I feel I shall find the truth on my deathbed and be surrounded by people too stupid to understand – fussing about medicines instead of searching

40

Bertrand Russell

1872-1970

Even when one feels nearest to other people, something in one seems obstinately to belong to God and to refuse to enter into any earthly communion – at least that is how I should express it if I thought there was a God. It is odd isn't it? I care passionately for this world, and many things and people in it, and yet . . . what is it all? There *must* be something more important, one feels, though I don't *believe* there is. I am haunted – some ghost, from some extramundane region, seems always trying to tell me something that I am to repeat to the world, but I cannot understand the message.

41

42

➤ TRUTH VALUE ◀

A sentence has a truth value when it can be said that the sentence is either true or false.

43

➤ PROPOSITION ◀

A proposition is a sentence with a truth value.

Some sentences do not have a truth value, such as questions, commands, and exclamations.

44

➤ ARGUMENT ◀

*An argument is a set of two or more propositions offered forth to support, demonstrate, or prove another proposition.
The propositions offered forth are premises.
The proposition supported, demonstrated, or proven is the conclusion.*

45

➤ DEDUCTIVE ◀

*An argument is deductive when the premises are offered forth to make the conclusion necessary.
If the premises are true, then the conclusion is necessarily true.*

46

➤ **INDUCTIVE** ◀

An argument is inductive when the premises are offered forth to make the conclusion probable.

If the premises are true, then conclusion is probably true.

Note that this is a logical definition of 'induction' and not a metaphysical one.

47

Be aware that some logic texts have poor definition of deductive and inductive logic.

48

They mistakenly define deductive logic as reasoning from general to specific; e.g.,

All men are mortal.

Socrates is a man.

Therefore, Socrates is mortal.

and mistakenly define inductive logic as reasoning from specific to general; e.g.,

This swan is white.

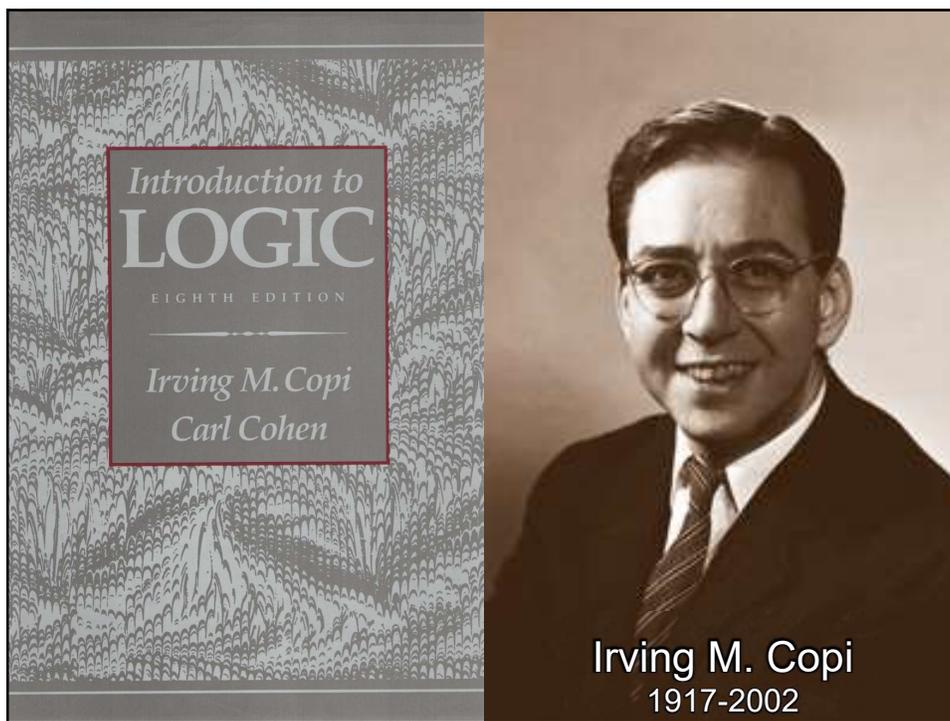

These swans are white.

Therefore, all swans are white.

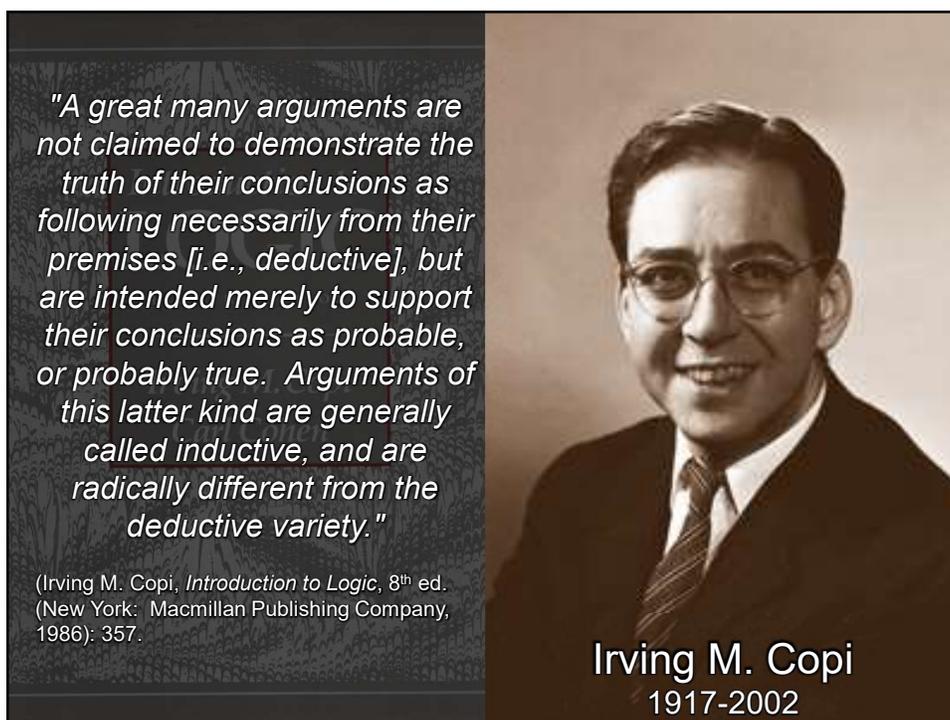

49

However, I agree with the logic texts written Irvin Copi and Robert Baum

50

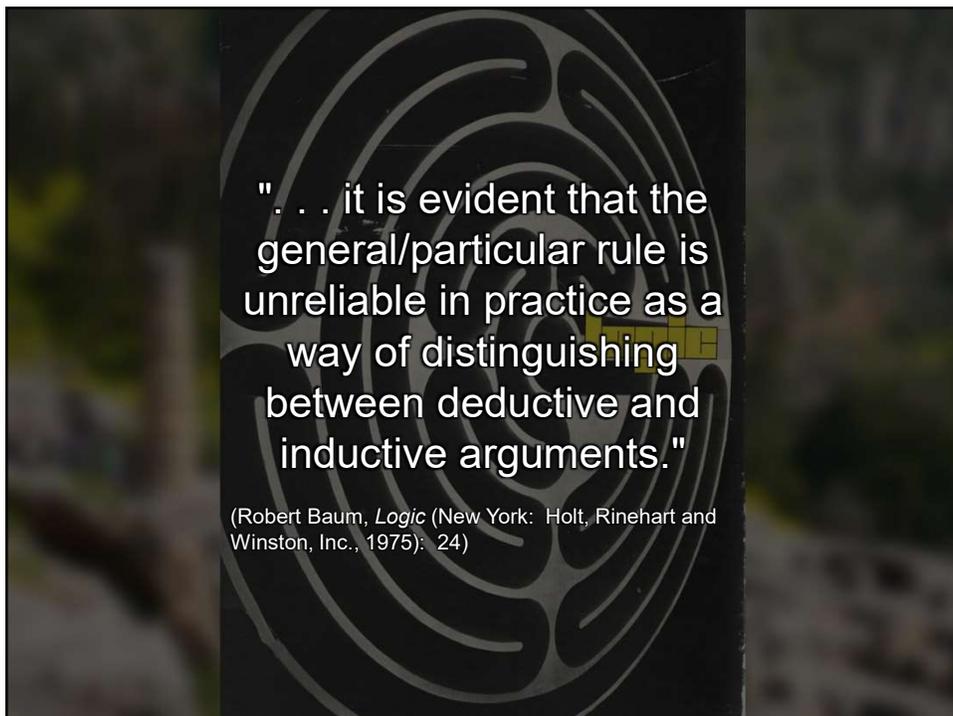

51

52

53

" . . . it is evident that the general/particular rule is unreliable in practice as a way of distinguishing between deductive and inductive arguments."

(Robert Baum, *Logic* (New York: Holt, Rinehart and Winston, Inc., 1975): 24)

54

➤ VALID / INVALID ◀

Strictly speaking, only arguments are valid or invalid, not specific ideas or points.

Validity has to do with only deductive arguments.

Inductive arguments are never said to be valid, but instead are said to be strong or weak.

55

➤ VALID / INVALID ◀

A deductive argument is valid when the premises actually do necessitate the conclusion (as deduction is intended to do).

In other words, a deductive argument is valid with it does not break any of the formal rules for validity.

56

➤ VALID / INVALID ◀

A deductive argument can be valid and yet still have a false conclusion.

The Sun is 60 miles from the Earth.

Light travels at 60 miles per hour.

Therefore, light will take an hour to get from the Sun to the Earth.

A valid deductive argument can have a false conclusion only if at least one of its premises is false.

57

➤ VALID / INVALID ◀

Further, a deductive argument can be invalid and yet still have a true conclusion.

All dogs are warm blooded.

All mammals are warm blooded.

Therefore, all dogs are mammals.

58

➤ SOUND ◀

A deductive argument is sound when it is valid and has true premises.

Only deductive arguments are said to be sound.

59

60

*Categorical logic utilizes
categorical propositions.*

*A proposition is categorical when it
includes or excludes all or some of
one category of things in / from
another category of things.*

61

*Take, for example, the proposition
"All men are mortal."*

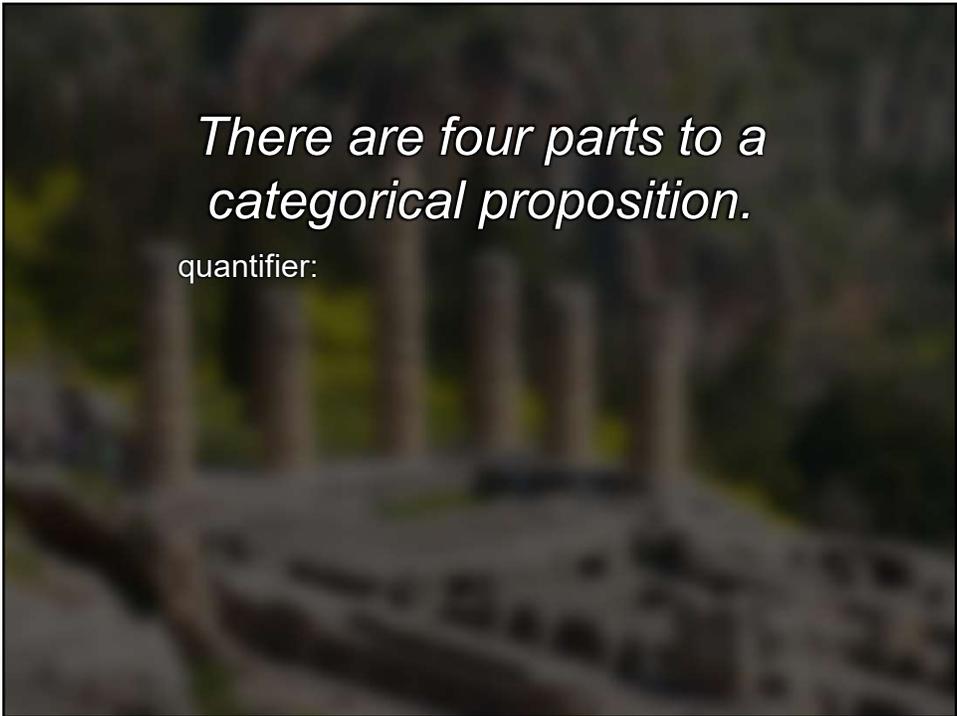

*The entire category of things that
are men is contained within the
category of things that are mortal.*

62

*There are four parts to a
categorical proposition.*

63

*There are four parts to a
categorical proposition.*

quantifier:

64

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

65

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term:

66

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term: *the subject of the proposition
designating a category of things*

67

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term: *the subject of the proposition
designating a category of things*

predicate term:

68

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term: *the subject of the proposition
designating a category of things*

predicate term: *the predicate of the proposition
designating a second category of things*

69

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term: *the subject of the proposition
designating a category of things*

predicate term: *the predicate of the proposition
designating a second category of things*

copula:

70

*There are four parts to a
categorical proposition.*

quantifier: *having to do with the quantity or amount
of a category (all or some)*

subject term: *the subject of the proposition
designating a category of things*

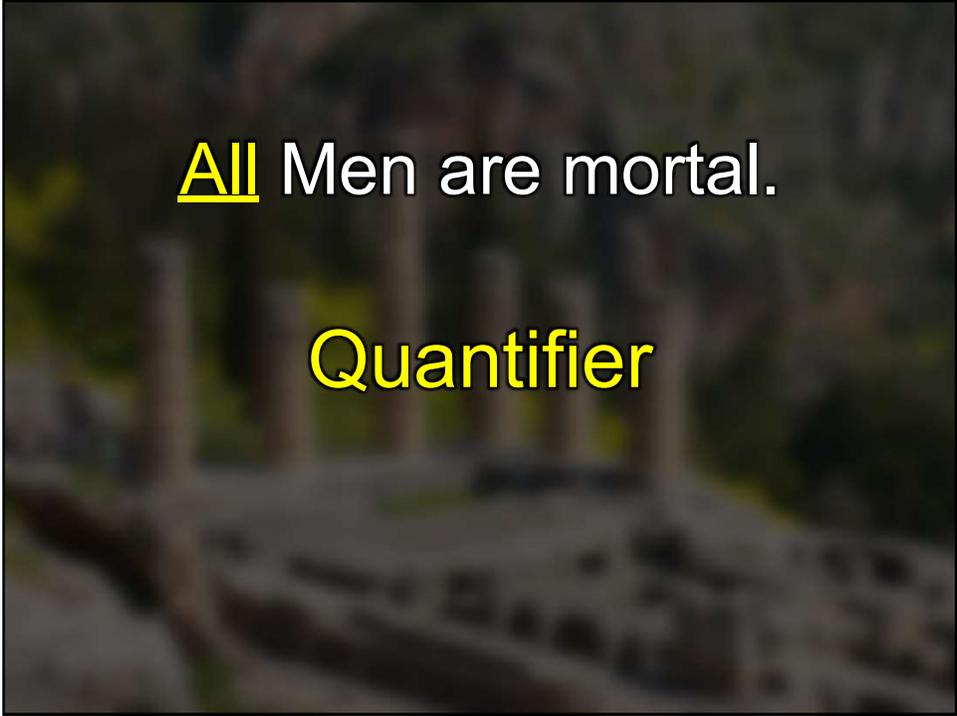

predicate term: *the predicate of the proposition
designating a second category of things*

copula: *the "is / are" or "is not / are not;" the
quality which is including or excluding*

71

All Men are mortal.

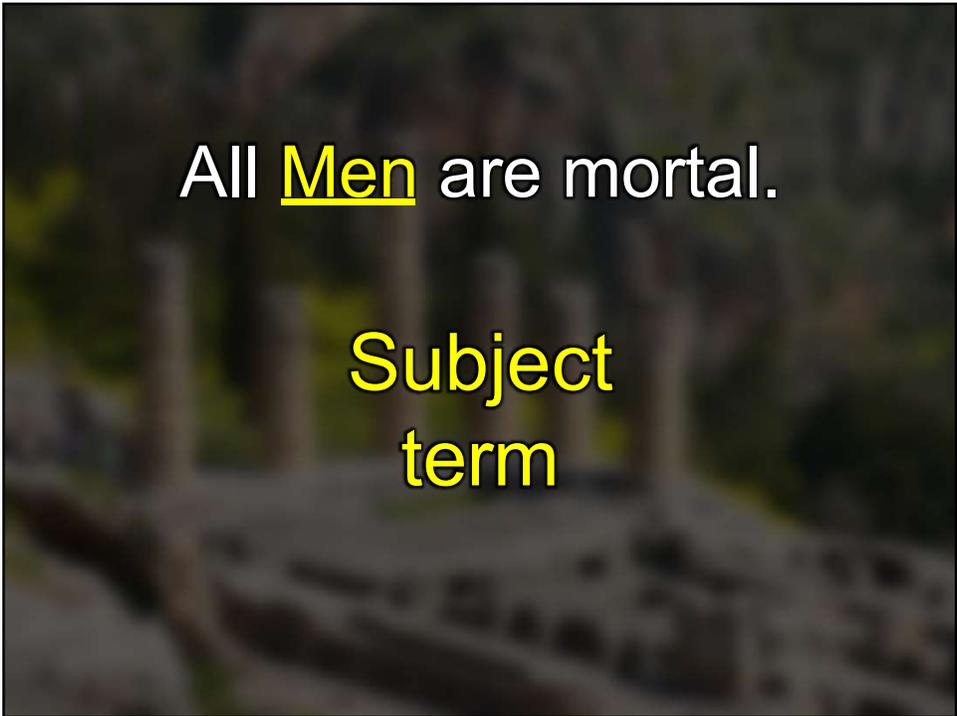

72

All Men are mortal.

Quantifier

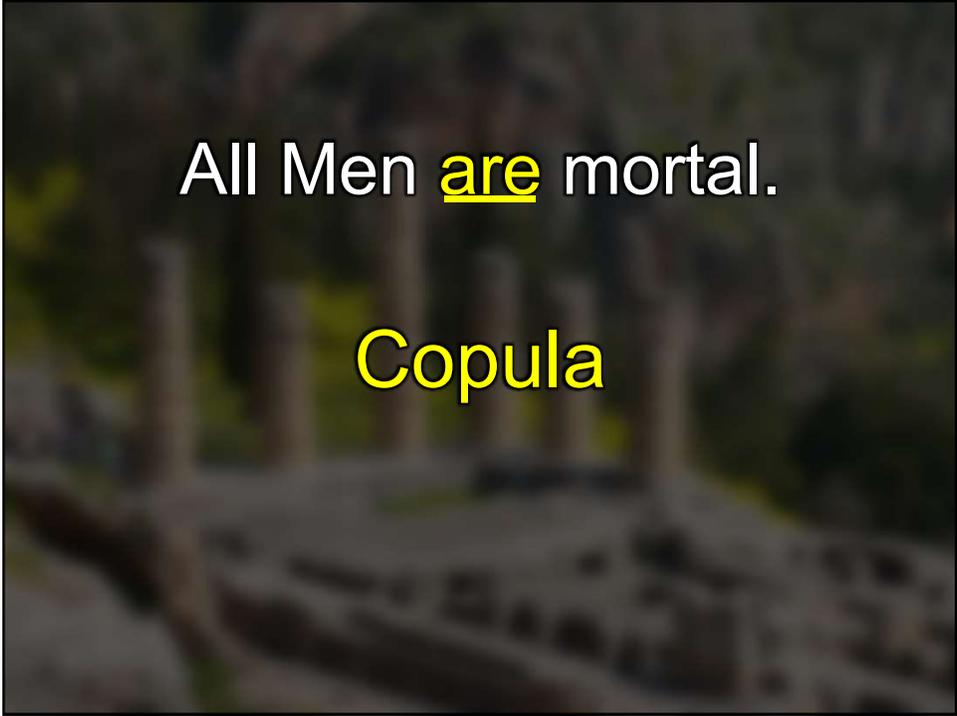

73

All Men are mortal.

Subject
term

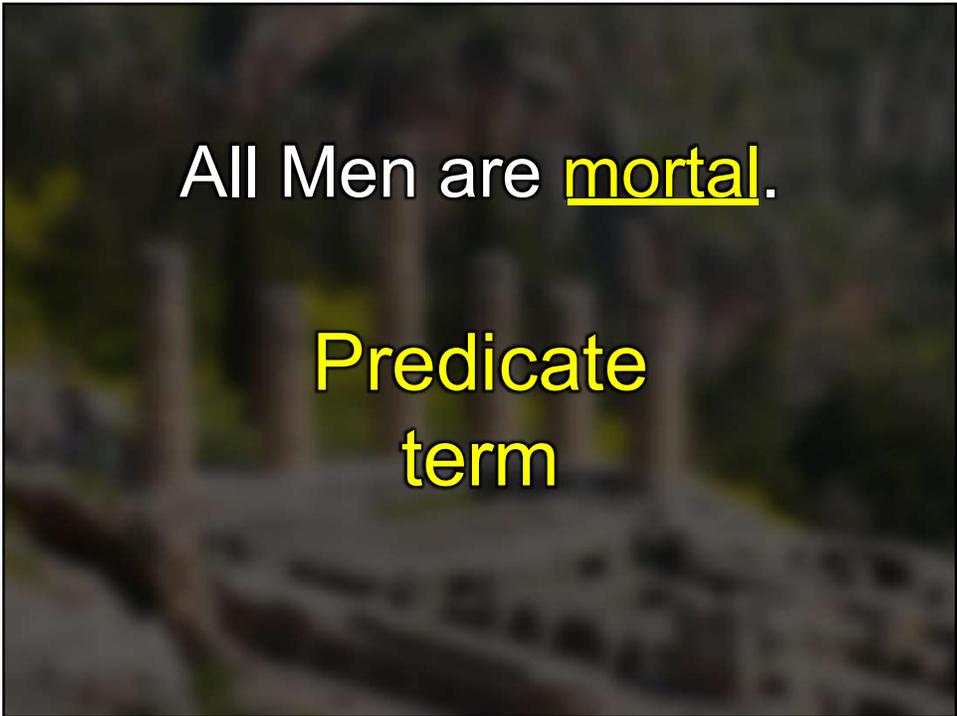

74

All Men are mortal.

Copula

75

All Men are mortal.

Predicate
term

76

There are two quantifiers.

all = universal

some = particular

There are two copulas.

is / are = affirmative

is not / are not = negative

77

This yields four possible combinations:

All S is P.

All S is not P.

Some S is P.

Some S is not P.

78

This yields four possible combinations:

All S is P.

All S is not P.

Some S is P.

Some S is not P.

79

This yields four possible combinations:

All S is P.

No S is P.

Some S is P.

Some S is not P.

80

All S is P. Includes the entire category of S in the category of P.

No S is P. Excludes the entire category of S from the category of P.

Some S is P. Includes some of the category of S in the category of P.

Some S is not P. Excludes some of the category of S from the category of P.

81

All S is P. UNIVERSAL AFFIRMATIVE

No S is P. UNIVERSAL NEGATIVE

Some S is P. PARTICULAR AFFIRMATIVE

Some S is not P. PARTICULAR NEGATIVE

82

All S is P. A PROPOSITION

No S is P. E PROPOSITION

Some S is P. I PROPOSITION

Some S is not P. O PROPOSITION

83

There are other types of propositions besides the categorical proposition.

hypothetical (conditional, material implication)

if, then; e.g., If it rains, then the picnic is canceled.

conjunction

both, and; e.g., We will go to both the picnic and the movie.

84

There are other types of propositions besides the categorical proposition.

hypothetical → *if, then;*
(conditional, material implication) *If it rains, then the picnic is canceled.*

conjunction → *both, and;*
We will go both to the picnic and to the movie.

85

There are other types of propositions besides the categorical proposition.

hypothetical → *if, then*
(conditional, material implication) *If it rains, then the picnic is canceled.*

conjunction → *both, and*
We will go both to the picnic and to the movie.

86

There are other types of propositions besides the categorical proposition.

disjunction  *either, or*

Either we will go the picnic or go to the movie (or both).

bi-conditional  *if and only if*

We will go to the movie if and only if it starts late enough.

87

The Square of Opposition

All cars are green.

A

No cars are green.

E

Some cars are green.

I

Some cars are not green.

O

88

The Square of Opposition

All cars are green. **A**

E No cars are green.

A and O are contradictory.
E and I are contradictory.

Some cars are green. **I**

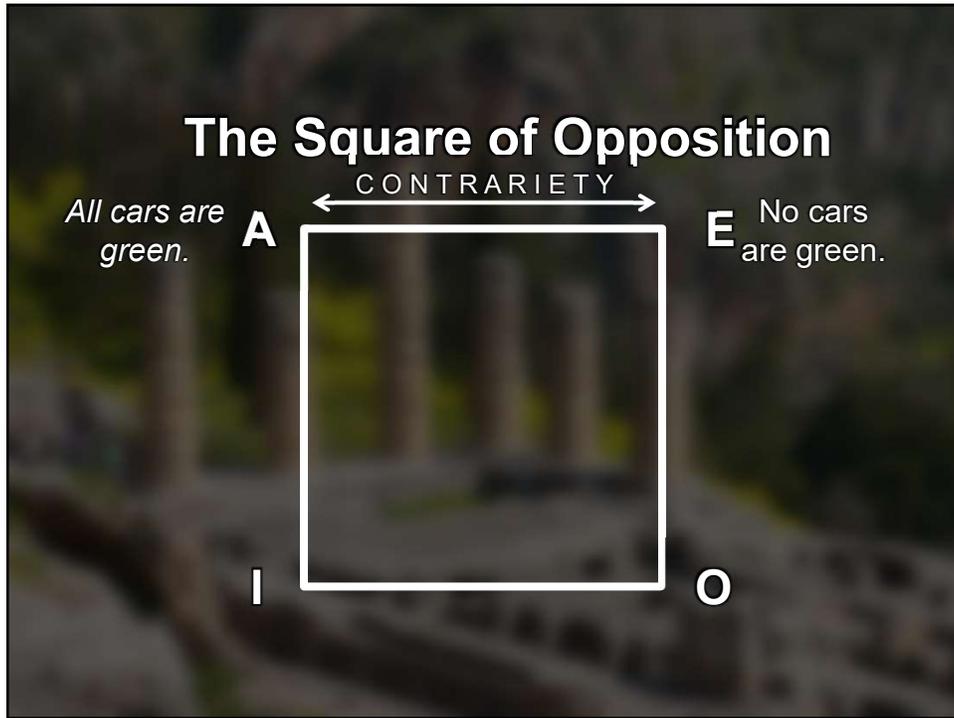

O Some cars are not green.

89

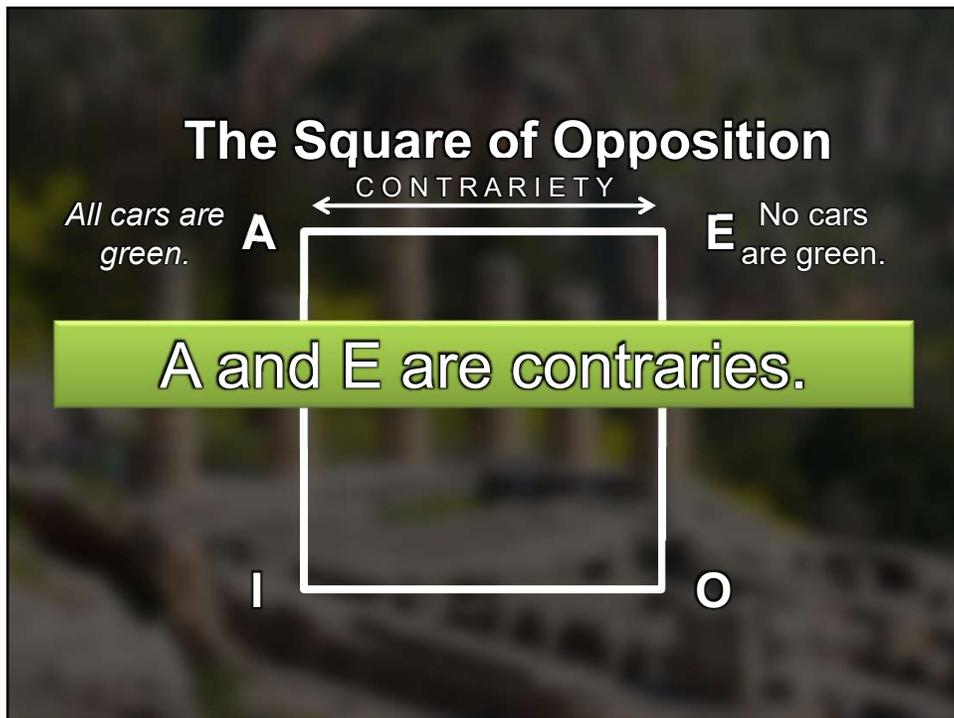

👉 **Contradictions** 👈

always have opposite truth values
if one is true, the other has to be false
if one is false, the other has to be true
cannot both be true at the same time
cannot both be false at the same time

90

91

92

👉 **Contraries** 👈

if one is true, the other has to be false
if one is false, the other is unknown
cannot both be true at the same time
can both be false at the same time

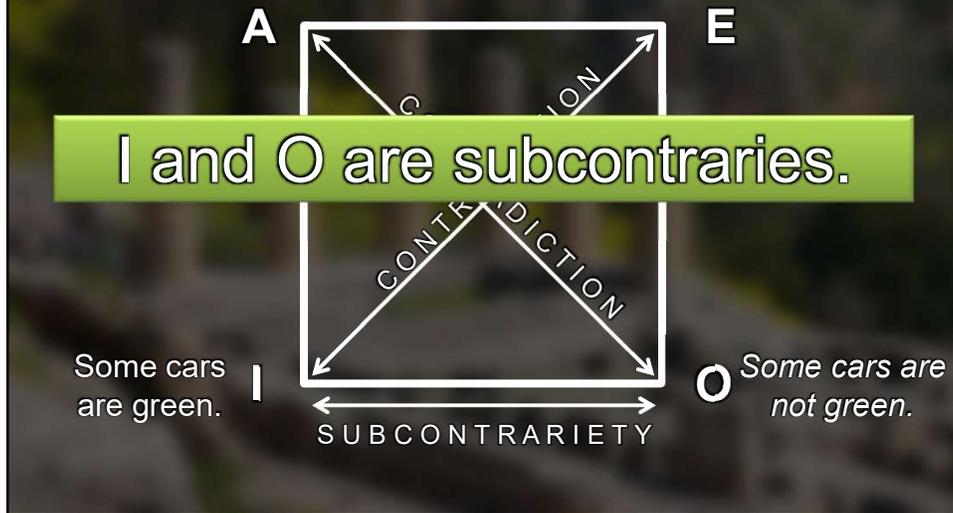

93

The Square of Opposition

94

The Square of Opposition

95

👉 **Subcontraries** 👈

if one is false, the other has to be true
if one is true, the other is unknown
cannot both be false at the same time
can both be true at the same time

96

The Square of Opposition

A All cars are green.

E No cars are green.

SUBALTERNATION

SUBALTERNATION

I Some cars are green.

O Some cars are not green.

97

The Square of Opposition

A All cars are green.

E No cars are green.

I is the subalternate of A.
O is the subalternate of E.

SUBA

SUBA

I Some cars are green.

O Some cars are not green.

98

The Square of Opposition

A All cars are green.

E No cars are green.

SUBIMPLICATION

SUBIMPLICATION

I Some cars are green.

O Some cars are not green.

99

The Square of Opposition

A All cars are green.

E No cars are green.

I is the subimplication of A.
O is the subimplication of E.

SUBI

SUBI

I Some cars are green.

O Some cars are not green.

100

👉 **Subalternates** 👈

If A is true, I is true.

If E is true, O is true.

If A is false, I is unknown.

If E is false, O is unknown.

101

The Square of Opposition

A All cars are green.

E No cars are green.

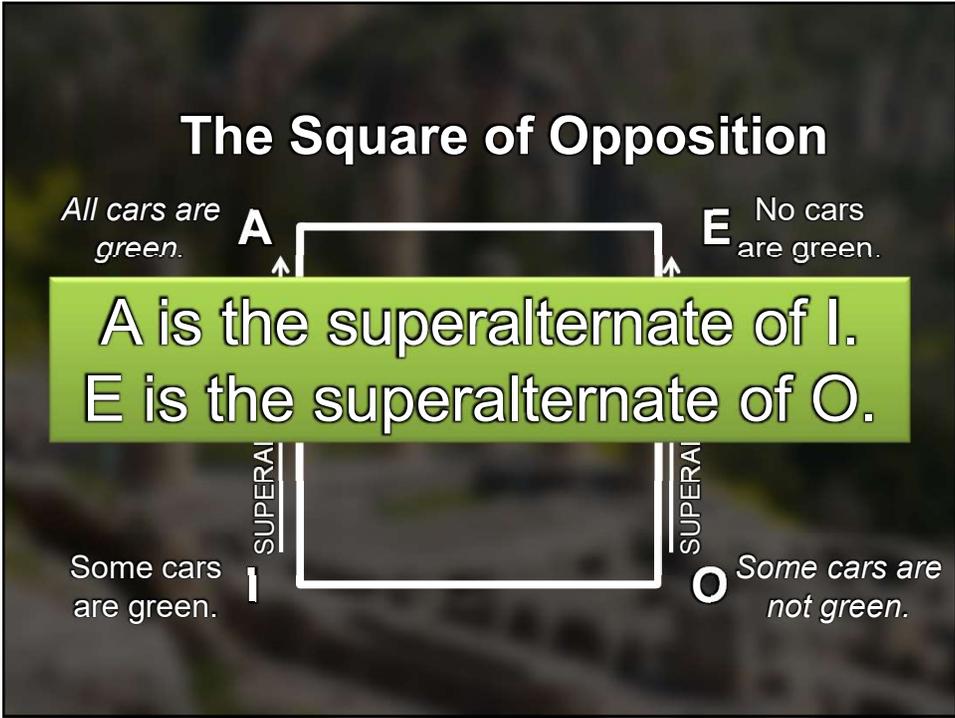

I Some cars are green.

O Some cars are not green.

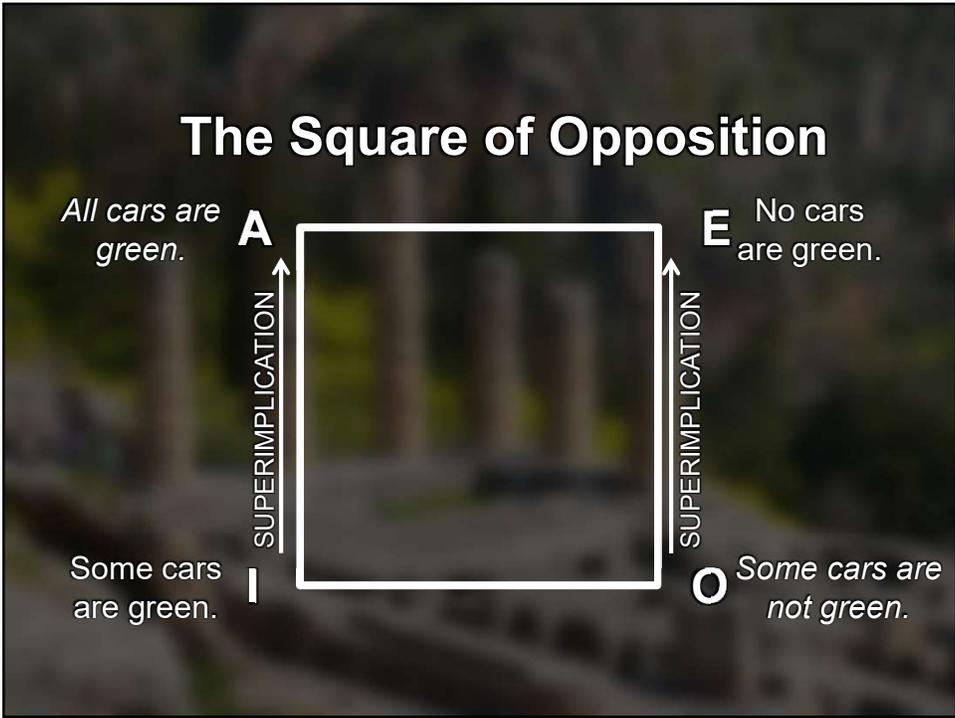

SUPERALTERNATION

SUPERALTERNATION

102

103

104

The Square of Opposition

105

☞ **Superalternates** ☞

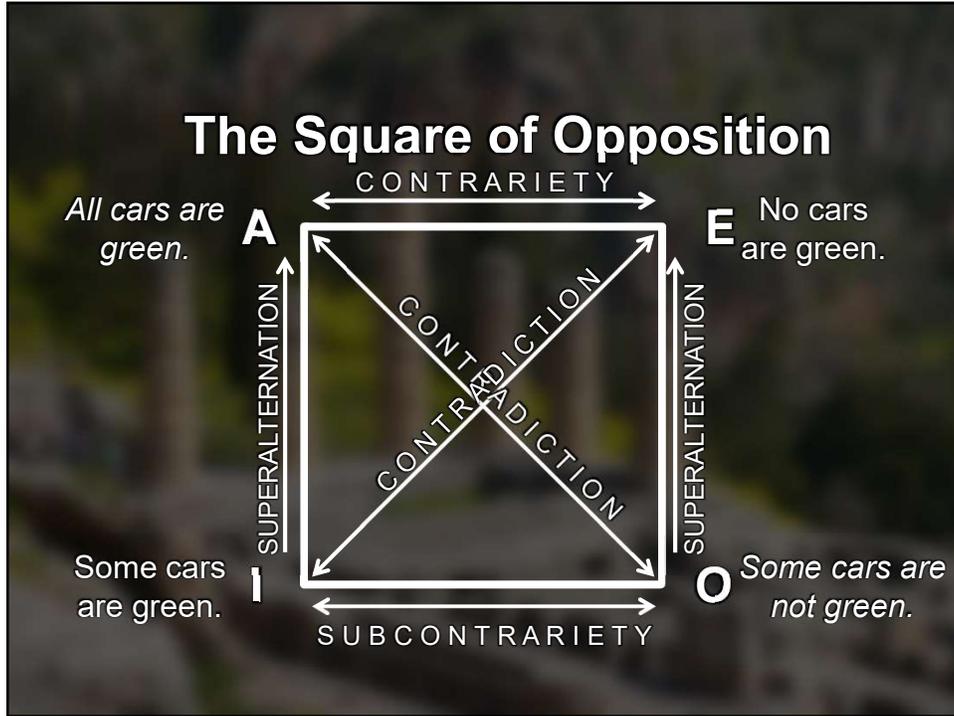

If I is false, A is false.

If O is false, E is false.

If I is true, A is unknown.

If O is true, E is unknown.

106

107

108

The most common type of categorical argument (for which Aristotle is famous) is the categorical syllogism

A syllogism is an argument with two premises and a conclusion.

A categorical syllogism is a syllogism composed of all categorical propositions.

109

Parts of the Categorical Syllogism

major premise

contains the major term

minor premise

contains the minor term

conclusion

contains the major term and the minor term but not the middle term

110

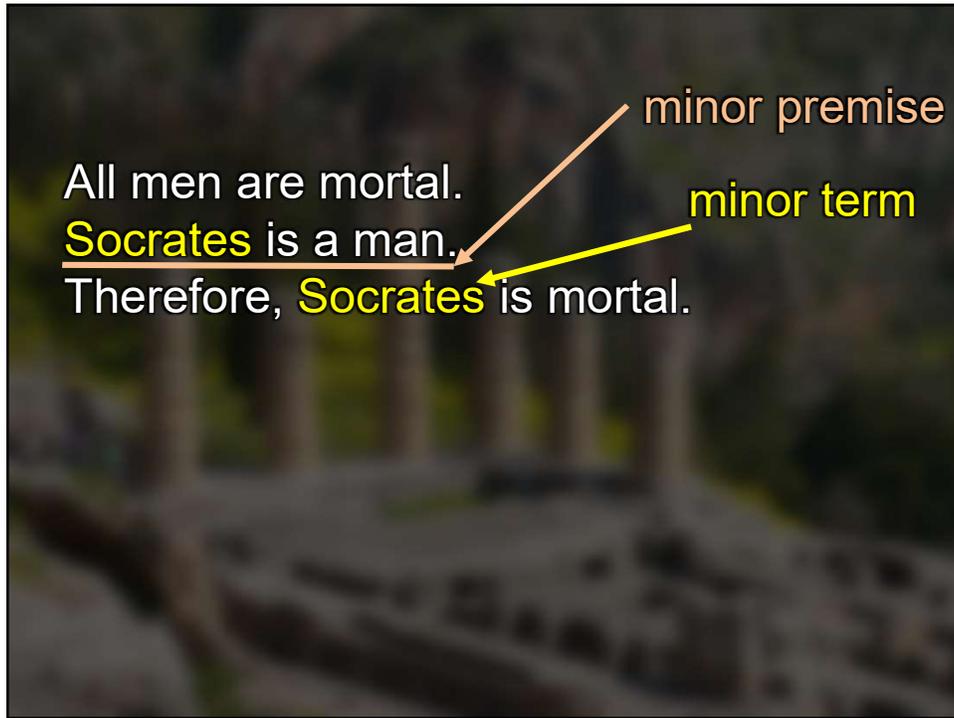

Identifying the Parts

- ❖ *The major term is the predicate of the conclusion.*
- ❖ *The minor term is the subject of the conclusion.*
- ❖ *The middle term occurs only once in each premise but does not occur in the conclusion.*

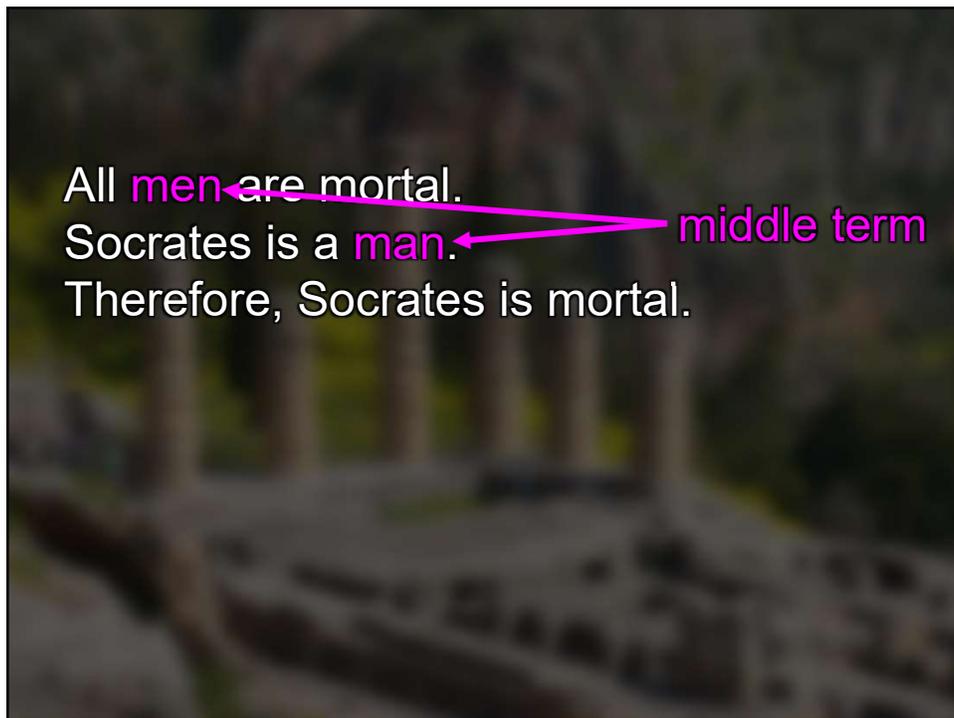

111

All men are mortal. major premise
Socrates is a man. major term
Therefore, Socrates is mortal.

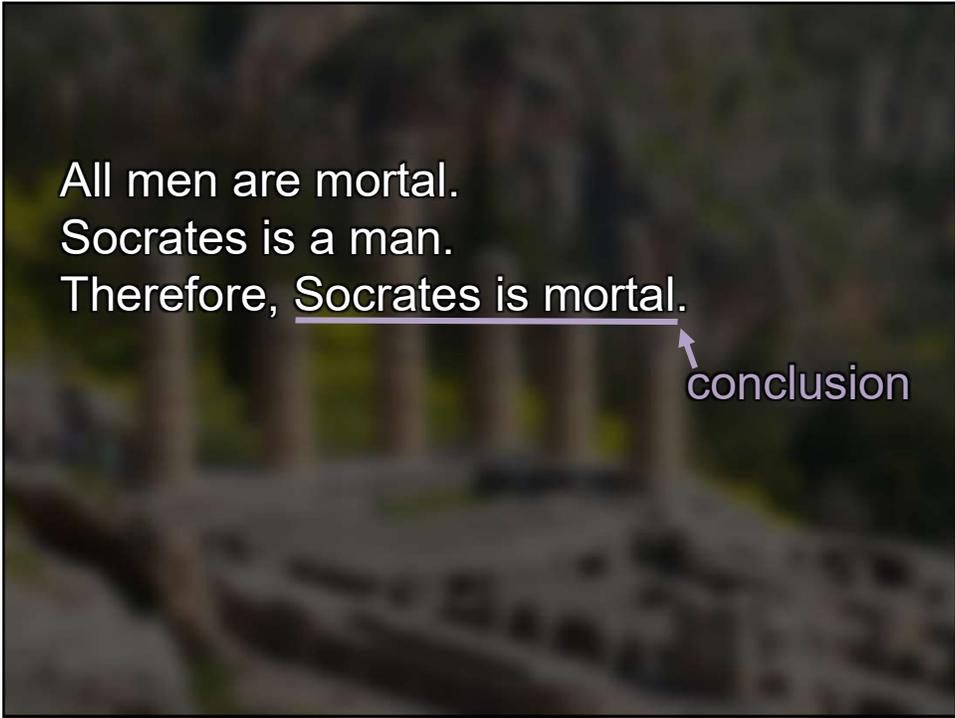

112

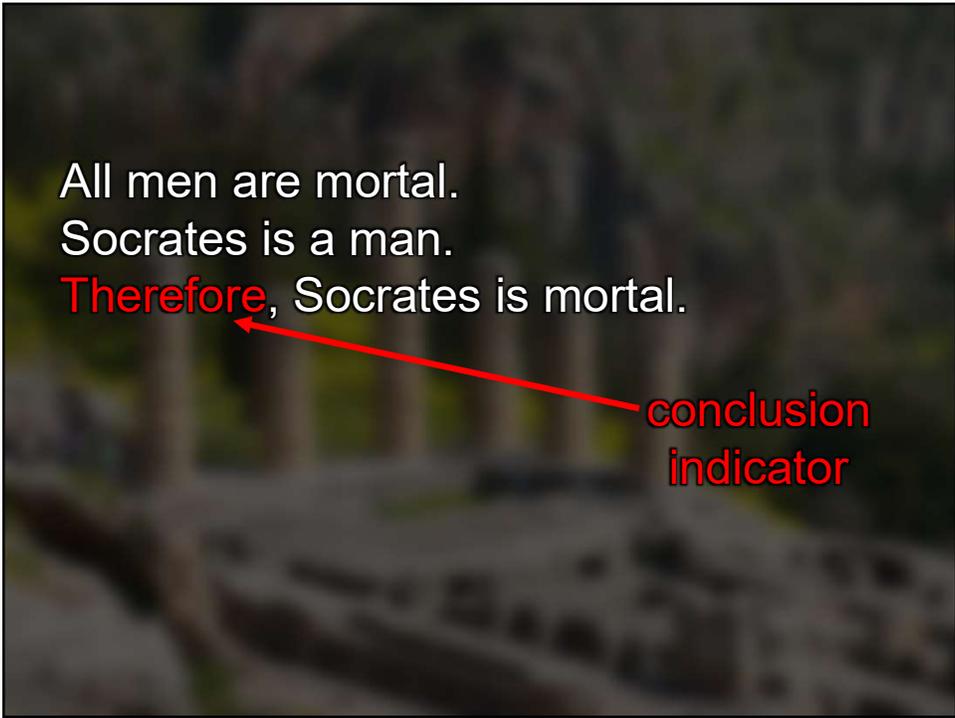

113

114

115

116

117

Rule #1: There can only be three terms.

Fallacy: four term fallacy; equivocation

118

***Rule #2: The middle term
must be distributed
at least once.***

***Fallacy: undistributed
middle***

119

***A term is distributed when
something is said about
the entire category, i.e.
either all of it or none of it.***

120

Rule #3: If a term is distributed in the conclusion, it must be distributed in its premise.

Fallacy: illicit major / illicit minor

121

Rule #4: If either premise is negative, the conclusion must be negative.

Fallacy: drawing an affirmative conclusion from a negative premise

122

***Rule #5: There cannot be
two negative
premises.***

***Fallacy: two negative
premises***

123

Some Ys are not Zs.
No Xs are Ys.
Therefore, some Xs are not
Zs.

Some humans are not female.
No monkeys are humans.
Therefore, some monkeys are
not female.

No Ys are Zs.
All Xs are Ys.
Therefore, no Xs are Zs.

No amphibians are mammals.
All frogs are amphibians.
Therefore, no frogs are
mammals.

124
